DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harrison in view of Win and Warrick. The patent to Harrison teaches pallet structure substantially as claimed including multiple layers (15), support structure (16), base (10), the difference being that the support structure is not a flexible film wrapped around a first and second axis and the base is not adhered to the structure. However, the patents to Win(at figs. 3, 4) teaches the use of a flexible film wrapped around a support structure to attached the structure and the patent to Warrick teaches the use of a adhesively attached plastic foam base. It would have been obvious and well within the level of one having ordinary skill in the art to modify the structure of Harrison to include flexible film structure as part of the support structure wrapped in a first and second axis,

as taught by Win and an adhesively mounted plastic foam base, as taught by Warrick since such structures are conventional alternative structures used in the same intended purpose of providing a unification and mounted base, thereby providing structure as claimed. The percentage of coverage is a matter of desirability and would have been obvious and well within the level of ordinary skill in the art. The method of producing the pallet would have been obvious in view of the structures.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Ridge, Seymore, Wegener, Budd, Bederman teach structure similar to applicant's.
